PRESIDENT'S CORNER

Jeff Hague

The summer is nearing an end and school is starting up. DSSA has been active, as usual, in protecting your right to keep and bear arms. Several weeks ago a lawsuit was filed in federal district court in Wilmington over HB 450 as amended, otherwise known as the "assault weapon ban". DSSA firmly believes that the legislation is unconstitutional in many respects and strongly believes the Court will agree. In light of the **Bruen** decision handed down in late June of this year by the US Supreme Court we believe our arguments will result in a favorable decision from the Court. However, even if we win the initial battle the war is far from over. The State of Delaware will appeal to the Third Circuit Court. We are probably a year away from any decision from the Circuit Court. Stay tuned for further updates.

As you know, the primary election is on September 13th. This time there are two primaries that involve some of our supporters. Sen. Colin Bonini in the 16th senatorial district is facing two challengers. Sen. Bonini has been a staunch defender of our Right to Keep and Bears arms for many years. He has our endorsement as well as the NRA's.

The other primary is in House District 36. Incumbent Bryan Shupe is facing a challenger. Rep. Shupe has also been a staunch supporter of our rights and is endorsed by DSSA and the NRA.

The general election is November 8th. This year's election is probably one of the most important elections we have ever had. We know our rights were under tremendous assault for the past two years. It can get worse. In the following weeks DSSA will announce what candidates we are supporting. It is imperative that you vote.

Another piece of legislation that was rammed through the General Assembly and quickly signed by the Governor deals with so called "large capacity magazines". On September 1st the Department of Safety and Homeland Security released proposed regulations addressing the "buy back" program. A copy can be found at this link [103](#)

[Regulations Governing the Delaware Large Capacity Magazine Compensation Program.](#)

It doesn't seem to matter that as of August 30th possession of LCM is illegal, unless you are exempted. Not really sure how one is to surrender something that is already illegal.

One particular element of the proposed regulation is that while you can turn a magazine in anonymously, no compensation will be given. It is required, for compensation that proof of Delaware residency be provided. I thought it was illegal to create a registry of firearm owners!! While it doesn't appear as a direct registry, if you are surrendering a LCM you must have a firearm that goes with it.

Public comments can be submitted to Terry.Pepper@delaware.gov by close of business October 3, 2022.

Don't forget the **Freedom Banquet** on Saturday, September 24th at the Modern Maturity Center in Dover. Check out the flyer at the end of this newsletter.

AUGUST IS: National Shooting Sports Foundation's "NATIONAL SHOOTING SPORTS MONTH", (and Bridgeville Rifle and Pistol Club's "FAMILY DAY AT THE RANGE / Wounded Warriors and First Responders Shoot")

By: Bruce Smith

NSSF's research shows that 50 million Americans regularly participate in target shooting and that millions more are interested in trying target shooting. Target shooting is fun, safe, and offers activities that men, women and youth of all ages and sizes can enjoy both recreationally and competitively.

Bridgeville Rifle and Pistol Club and BKK Firearms/BKK Defensive Systems will host a FREE full day of Family fun, Saturday, September 10, 2022, from 10am-5pm at Bridgeville Rifle and Pistol Club, 10409 Rifle Range Road, Bridgeville, Delaware 19933.

Open to everyone, beginners, experienced, all are welcome. There will be 5 Days of shooting fun for kids, teens and adults including airguns (come try a full auto BB gun), .22 rimfire guns, pistol caliber carbines, rifles, and pistols. Even if you've never shot a firearm before, or don't own one—NO PROBLEM—Firearms will be on hand for you to try, and we will have experienced instructors and range safety officers to help every-one that comes and instruct them in all safety aspects of shooting skills and fun. Some Ammo will be provided. (If you bring your own gun, you must provide your own ammo). Vendors will be on hand displaying firearms, firearms accessories, and more.

Organizations such as USCCA, NRA NSSF, etc. and Shooting Disciplines such as IDPA, Steel Challenge, Armed Women of America, Cowboys Action Shooters, IBS Benchrest, F Class/High Power and others will be on hand to answer questions and help. The IDPA and Cowboy shooters will also do live fire demos and instruction throughout the day alternating every 1/2 hr., between 10:30 AM and 3:30 PM.

Come meet and greet local Dignitaries (Senators, House Representatives, Mayors and Candidates for 2022 elections) as they join in the shooting fun and try out the different firearms on many of the steel and polymer targets. We will have give-aways and drawings for many door prizes that have been donated for this awesome event, A firearm or two might also be auctioned off... Several food trucks (Vanderwendes' Ice Cream, Big Al's Roast Beef, My T Fine Bar-B-Que and others) will be on hand, offering sustenance for hungry shooters.

If this event sounds like something you might be interested in, volunteers to help keep things moving for this event are most welcome and needed.

Members of the BRPC, non-members, and everyone from our surrounding towns & communities are welcome.

This event offers a chance to get outside and bring your family and friends and experience the fun, safety and camaraderie of the shooting sports. Ear protection will be on hand for those that need it.

Masks are NOT required, but are optional, (there will be masks on hand for those that would like them). Hand Sanitizer will be available at each shooting table and all firearms will be sanitized after each use. For more information or to volunteer, please contact Bridgeville Rifle and Pistol Club or Mr. Bruce Smith, Bridgeville "Family Day at the Range, Wounded Warriors, First Responders Shoot" Director: 443-366-6277 or email: info@bkkfirearms.com

Shadow Systems MR920L – Coming Out of the Shadows

By: Justin Opinion

Originally published May 15, 2022 by GunsAmerica Digest

To move stealthily, walk secretly, go unnoticed, or pass quietly... these are all synonyms for being in the shadows. While all of these descriptions might sound very tactical, it

seems that the new guns being produced by Shadow Systems are far less likely to be overlooked.

If you're not yet familiar with Shadow Systems, and you want to look cool in front of the squad at the next match – it's time you got a crash course. The folks at Shadow Systems have been making components for Glock pattern pistols for years – most notably their quality slides and barrels. Even in that somewhat crowded space, they quickly became known for innovation and style – and most of all for making good stuff. Now that the patents have expired on some Glock designs, there is a new cottage industry of what I'll call "Glock-patterned-innovations" in the handgun market. These handguns generally incorporate the Gen 3 functionality in terms of the core of the gun – the trigger group and barrel lockup, as well as the frame required to properly fit them. Some companies are happy making good quality alternatives to the Gen 3 design, with some various takes on ergonomics and cosmetics. There are a few manufacturers that are bringing more to the table than just offering a "me too" Glock clone – and sitting high among those few is Shadow Systems.

I had previous experience with Shadow Systems slides and barrels, and knew the brand to be a sound option. But I had not yet had an opportunity to test one of their full, out-of-the-box ready to shoot pistols. The more I looked into their specs and models, the more interested I became. I chose the

MR920L Elite because it's a configuration that I like – the full-sized 4.5-inch barrel sitting atop a short 15-round grip frame. It's a configuration that can be equally carried concealed and used in competition.

MUCH MORE THAN A CLONE

It only takes a moment of handling the MR920L and reviewing the accessory parts and documentation that accompany it to realize that this is no ordinary clone. It starts with the grip frame, which is of course of polymer construction. The contact surfaces are well textured and keep the gun planted in your hand, even when fired with a spirited cadence. The shooter's grip is aided by the extreme undercut of the trigger guard and the extended beavertail. Index points in front of the slide lock position keep the 'thumbs-forward' grip on point and give that trigger finger a nice home when not firing. Even the texture on the front of the trigger guard matches that of the handle – for those who never learned a proper grip.

While we're talking about the southern hemisphere of the gun, we have to address the trigger. Whether Shadow Systems makes or sources this trigger is not known to me at this writing, but it is a very nice one. The feel of the trigger is pleasant – and while it follows the Glock design, the integrated safety blade is wide, smooth, and not at all uncomfortable. The trigger is also light, crisp, and tight. Take-up is a smooth ¼-inch travel to the wall, where the break is clean and measures between 4.5 and 5.0 lbs. (post break-in). There is no perceivable over-travel, and the reset is short and very tactile back to the wall – with no take-up for the next shot. Just behind that, the large magazine disconnect button is of Glock Gen 4 size and does what it's supposed to. Above that, the slide stop/release control is flat and ordinary and works just fine. Its size is a hybrid between standard and extended if you're comparing it to you-know-who.

Moving up to the slide, you'll find it to be quite familiar inside and out in terms of design and function. The aesthetics are another matter – with lots of cuts and steps and slots. Serrations fore and aft are angled and provide good grip for running the slide. The stepped ridges on the top of the slide can also aid in this, as well as providing good glare elimination for the shooter. But mostly, they just look cool – and that's good enough for me. Cutouts on each side of the slide display the bronze-colored fluted barrel inside and help lighten the weight of the slide.

Perhaps the best feature of the grip frame of the MR920L is the replaceable backstrap. It's not just about choosing from small, medium, or large. The three options provided with the gun alter the grip angle and feel in a fundamental way. Essentially, we get to choose whether the angle is that of a Glock, a 1911 or a S&W M&P. This is no gimmick conceived by the marketing team – it makes a significant difference in feel, draw, and presentation which option you select.

A flared magwell extension is included with the pistol. It is not installed by default but is simple to attach. For concealed carry, one might not want to add that extra thickness in the printing area, but for every other purpose I can think of, it is a great help.

The slide is pre-cut to accept a mounted electronic sight, or "red-dot". This is another area where Shadow Systems has innovated. The slide cut has been engineered to accept all popular brands and designs of optics without adding an

adapter plate. The list of supported optics includes: Holosun, Leupold, Shield, SIG, Swampfox, Trijicon, TruGlo, and Vortex. Other brands may also be compatible if they utilize the same footprint and bolt pattern as one of these listed. That's a lot of support – and you don't have to buy anything extra for it. Everything you need is provided with the gun, which includes several sets of screws and a few different spacers that will fill the length gap if needed. The user's manual has a very nice chart that tells you exactly which parts to use for what brand and model optic. The spacers are listed as A,B,C and the screws as 1,2,3. Just like the Jackson5 always said – ABC really is easy as 123.

I didn't mount the optic for my primary break-in and testing of the gun because I wanted to run it with the open sights. I did install the magwell right off the bat, which was easy and works great. When I did later mount an optic, I chose the Holosun 507c green. Following the recommended parts list made it easy – however, there is one important note. The spacers are designed for a slight interference fit, meaning that they are a tad wider than the gap they are meant to fill. Shadow Systems does this to ensure that the spacers will be tight and always hold the optic in place – basically, the polymer spacer will be under compression, constantly pushing the sight against the opposite “wall” when installed. This takes a lot of stress off the screws during recoil, and helps keep the optic zeroed and reduce wear and fatigue. In my case, it was tighter than expected. I wasn't able to get the Holosun into place even with as much pressure as my thumbs would provide, and I didn't want to use any tool to overpower it. So, I used a sheet of very fine grit sandpaper and made just a few passes over the flat side of the spacer – tried it – made a few more passes – tried it again, maybe three times. I estimate that I removed no more than a few thousandths of an inch. Finally, with a very gentle tap from a small nylon mallet, it went into place. I'm confident that it is still an interference fit. But if you encounter this challenge, I would encourage you to contact Shadow Systems for help before you alter any parts – they also encourage you to do so.

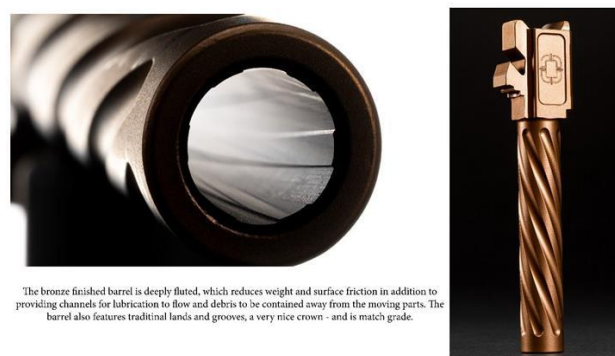

SHOOTING THE MR920L

Putting rounds downrange through the Shadow Systems MR920L was pure joy. When you pull the trigger and smack the target with lead, you can at once realize that this gun has

been engineered for serious business. Whether that be duty or home defense, or competition – it is equal to the task. Ergonomics are excellent – thanks in part to the ability to fit the grip angle to personal taste. The sights are fantastic, and the trigger is light and crisp with a positive reset that puts it right back at the break point. I also found the pistol to shoot pretty flat, which I will again credit to the grip angle with help from the texture, extended beavertail, and undercut trigger guard.

Shadow Systems recommends a couple hundred rounds for break-in, because they believe in fitting the parts tight and letting them wear together. There is no better fit than that made when friction mates two parts to accomplish the final polish and size. As such, there were a few stoppages in the action – mostly due to feeding issues or hard primers. As time went on, I started to have serious doubts as to whether the break-in was to blame, or the ammo. I won't swear I solved the mystery, but the problems stopped after I switched ammo – whether it was due to the ammo change or just the round count, we may never know.

I could feel the gun breaking in with each new magazine. By the time I was finished with range work, I had every confidence that it was running at 100%. Small price to pay for such a well-made pistol. I would recommend using good quality ammo for the break-in, to help identify the possible cause of any issues.

As for the gun's accuracy, it was clear to me early on that it was capable of shooting far tighter groups than I would ever be able to produce with it. Both steel and paper groups

were tight and consistent – and above all – easy to make. This is a pistol that makes you look good.

JUST MY OPINION

Shadow Systems has raised the bar considerably with the MR920L, and I presume this also applies to the other models in their catalog. The decision to include extras such as the differently angled backstraps, magwell, and all the needed parts to install nearly every brand of red-dot optic on the market is a good one. This might all be window-dressing if it weren't for the fact that the pistol is extremely well made and accurate.

The Shadow Systems MR920L is a lot of things - but above all it's a shooter!

My advice is to start out with a couple hundred rounds of good quality ammo and give the gun a patient and thorough break-in as prescribed. After all, greater suffering has been endured than having to spend an afternoon at the range shooting such an ergonomic and mechanical masterpiece as this.

Shadow Systems is earning a reputation as the “must have” handgun for anyone who likes the Glock form factor – and with very good reason. I paid for this one. It's mine. You'll have to get your own.

The 2022 America Match

By: Jon Howell

For Fullbore Shooters, the equivalent of the modern Olympics in rifle shooting is the Palma Match. It is an international match held every four years, with the location

of the match alternating between participating countries. These matches require the use of a restrictively configured rifle in .308 Winchester or .223 Remington caliber for target rifle shooters (Palma rifle in the U.S.). The matches are conducted under the rules of the International Confederation of Fullbore Rifle Associations (ICFRA) which is the international association for fullbore rifle shooting sports of Target Rifle ('TR') and F-Class. These tournaments are long range competitions shot at distances between 300 and 900 meters or 300 to 1,000 yards depending on the range.

The America Match is traditionally held every 2 years opposite the Palma Match and the location usually alternates between Connaught, Canada, and the USA NRA's Whittington Center range in Raton, NM, although it has been held at Camp Perry, OH, Bisley England, and Bloemfontein South Africa as well.

This year's America match was held on August 21st, 2022 at the Connaught Rifle Range in Nepean Ontario in Canada, in conjunction with the Canadian Fullbore Nationals Match, a near week-long shoot with individual competitors arriving from many nations. The Dominion of Canada Rifle Association (DCRA), just like the US NRA, conducts an annual national championship every year. Due to the impacts of Covid-19, this was the first DCRA Fullbore Nationals since the summer of 2019. This match is held over 6 days and includes both individual and team events. Three members of the Bridgeville Rifle and Pistol Club made the trek to Canada to participate in these matches: Mike Schallow, Don Phister and Jon Howell.

The America Match is just one match in that six days of shooting, and is sort of a 'Main Event' type of match. This match features teams of eight shooters; including two sub-coaches, a main coach, an adjutant, a captain and two reserves. Each firing team member will shoot two sighting shots and 15 shots for record at 300, 600, 900 and 1,000 yards (or meters, again depending on the venue).

The America Match is also one of only a very few team matches in the world where US shooters can earn points towards the NRA's International Distinguished Rifleman Badge, a distinction that fewer than 100 shooters have

earned. Over the past 20 years the USA and Great Britain Teams have dominated the field of participating teams, each team winning about the same amount and collectively 11 out of the last 12 matches.

In an impressive prelude to the America match, shooters from the United States performed extremely well. In the Governor Generals match, (which requires both a qualifying round and a final round), seven US shooters placed in the top eleven. At the end of the day, US shooter John Field was the Champion, and was carried off the range by his mates on the traditional chair, all the while being led off by the traditional bagpiper.

Video of the 'Chairing' here:

<https://www.facebook.com/510039980/videos/pcb.10151540079624981/1307855043081878>

In the grand aggregate there were 8 Americans in the top 20, with the top 20 separated by only 6 points after 4 days of shooting.

The Americans won the Outlander Team match which consists of the same number of shooters as the America match but being fired at only 600 and 900 meters with 15 shots per shooter. In the Coaches Match, Team USA prevailed again, placing 1st. Great Britain took second, and two US teams tied for third, with only a single point separating first and third places.

After the DCRA Championships were completed, it was finally Sunday, August 21st and time for the big dance. The reason most of us had traveled to Canada had arrived. The weather the previous week was mainly sunny and unseasonably hot, but the forecast for Sunday was for rain. As a consequence, the range officials and captains decided to start at 600 meters.

The weather was overcast with light breezes. When the 600 meter firing was done, the USA held a small 4-point lead with an impressive score of 599 with 79 V's, losing only 1 point for all 8 shooters – WOW! And, then it was back to 900 meters. 900 meters is the most demanding of the distances (almost 1000 yards) and if the match had to be shortened to only 2 stages due to weather – which are required to make the match official – then the hardest stage would be done.

Again, during the 900 meter stage the rain held off and the breezes were light but variable. The US line and back coaches kept us in the 5 Bull Ring (highest scoring ring versus 10 points in the US). When the 120 shots for the 8 firing members were complete, the US lead had increased to 6-points. This is a nice lead but not enough to secure the win with two stages left to go.

The decision was then made to move up to 800 meters. Again, the rain held off, but the wind became much more 'sporting'. The US coaches were up to the task and the Great Britain and Canada teams fell further behind, with scores of 593 for Great Britain and 587 for Canada versus a very nice 596 for the US team. Losing only 4 points out of 600 for 8 shooters calculates out to a 99.5 percent success rate.

As is common, despite the threat of rain, it was time for lunch. A lunch break is very common in the other countries as the targets are operated up and down by "Markers" or target pullers and the break is taken to feed the markers. The captains were to reconvene after a 90 minute lunch break at 2:30 pm.

At 2:30 the sky was dark and the radar showed imminent rain, but, with the US essentially abstaining (we were in the lead after all), Canada and Great Britain elected to shoot. SO, down to the 300-meter mound we went. BUT, by the time we got to 300 meters it was pouring rain and didn't look like it was going to stop. Once again, the captains met but this time the Canadian captain decided to throw in the towel. It was really unlikely that either Canada or GB would be able to overcome an 18 point or 9 point deficient at the short line.

At that point, the match was history. The US had prevailed. In a show of good sportsmanship at the prize giving each team gave the others a resounding Hip-Hip-Hurrah and all headed home.

Respectfully submitted; Jon Howell, firing member 2022 USA America Match winning team.

Highpower Update

By: Frank Nedza

July 10th 3 x 600 Midrange Match

After cancelling Saturday's 300/500/600 yard midrange match, it was nice to see 28 of our friends come out for some shooting fun. We had 11 sling shooters, and 17 F-Class shooters join us for the day's event.

In F-Class (Open), Bill Holden took the match win, with a SUPER NICE perfect score of 600-35X. That is some seriously good shooting; especially considering that the 'ten' ring is only six inches across at that distance (600 yards) and the X ring is only THREE inches across, and he shot 35 of sixty shots inside that small area. I believe it is Bill's first perfect score, but it probably won't be his last. Well Done, Bill!

In F-T/R, Jim Crofts fired a nice 597-36X for the category win (also on that tiny F-class target, but this time with a .308 and off a bipod). Good shooting Jim!

On the sling side of things, Joe Fogg had another good day, posting a pretty sweet 598-48X for the win. Matt Zagorski had a good day too, posting the same score (598) but with only (ONLY???) 38 X's. In fact, the top three finishers fired scores of 598, with only the X-count separating the shooters.

Overall, there were 13 clean targets shot that day, proving we have some mighty fine shooters coming to Bridgeville.

July 23-24th Long-Range Match

While we were looking forward to having a Palma Match this weekend, prudence and the weather dictated a change in venue to a 3 x 1000 yard format for both days, eliminating the need to lay out in direct sunlight and stupid-high

humidity. In retrospect, it was a good move, and kept us a little 'fresher' than we would have been otherwise. We had 22 long-range shooters on the line, with a 9-11 split between Conventional (sling) F-Class shooters.

Joe Fogg (that name sounds familiar...) had another great day, taking the sling side win with a very nice 1181-53X. That is 53 of his 120 shots INSIDE that 10 inch X-Ring, from 1000 yards away, with IRON SIGHTS. Great shooting Joe!

On the F-Class side, Monica Kokoszka shot a VERY NICE 1179-53X for the F-Open win. I believe that this is Monica's very first match win, but I don't think it will be her last! Nicely done, and CONGRATULATIONS young lady!

Todd Norfleet took the F-T/R win, with a pretty tight 1168-45X. Nicely done, Todd!

August 13-14th Mid-Range and Team Challenge Match

August is Team Month, where we try to encourage team shooting amongst our competitors. The format is two individual matches at the selected distance (600 yards in this case), followed by a 2-person team match –sort of a 'shoot with your buddy match, with minimal pressure.

We had total 33 folks show up, with 14 shooting sling supported rifles, and 19 shooting F-Open or F-T/R.

The weather was pretty darned nice for August, about as good as anyone could want for this time of year. Humidity was down, and the winds were decent.

On the F-Class side of things, Todd Norfleet (where have I heard that name before...) shot a very nice 796-41X, over the two days, besting all the F-Class shooters with his T/R rifle. Great shooting Todd! In F-Open, Jack Neith put in a nice 783-29X for the category win.

Over on the sling side of the house, Chris Moriarty turned in a VERY NICE 798-43X over the two days of individual shooting. Nicely Done, Chris!

The team matches were, in a word, FUN. And that was the whole point –to have folks work together in a team atmosphere, and have fun. I think some folks were surprised at just how much fun team shooting can be, and hope that they continue to pursue it.

August 27-28th Long-Range and Team Challenge Match

It was HOT. It was HUMID. It was FUN (well, mostly). We had a total of 29 shooters come out for this weekend's activities. The format was the same as the Mid-Range match above –two individual matches, followed by a two-person team match each day. We had 11 shooters on the sling side, and 18 F-Class shooters on the line.

In F-Class, Master Class shooter Todd Norfleet (again, that name... ☺) took the overall class win his F-T/R rifle, firing a nice 840-35X (out of 850 possible). DUDE! Todd is really shooting well, and will probably be moving up to High Master sometime soon.

In F-Open, Corey Woods shot a pretty darned good 830-22X for the category win (bare feet and all ☺). Nice shooting Marine!

On the sling side of things, Rich Kussman took the win with an amazing consistent performance of 199's. Three of them with 11 X's (breaking the streak with 12X's on the last match), for a total of 796-45X. Good shooting Rich!

The team matches were pretty much a repeat of the Mid-Range teams –fun! There was lots of laughing and good-natured ribbing after the match about who-cost-who windage points. And that, my friends, is what it is all about – good days spent on the range with friends old and new.

Scores can always be found on the Bridgeville website:

<https://brpc-de.com/2022-high-power-rifle-match-results/>

Our match schedule can be found there as well:
